

design: Andreas Störiko

moin **action-chair**

Instructions regarding the function

After lifting the shell it remains in a position at an angle of about 30° and is held up by gas springs. An infinite number of chairs can now be nested in a linear fashion and moved as a stack. Naturally, smaller packages of chairs are easier to maneuver than larger ones. To sit down, press the shell down against the initial counter-force of the gas springs.

Weight

The heaviest version in leather with armrests weighs 10.6 KG.

Materials

The frame is completely made of cast aluminium. The moulded wooden arm-chair shells are made of beech plywood.

Optional armrests

Armrests are optionally available with matching surface finishes and can also be retrofitted to the upholstered versions.

Surfaces and colours

The frame is available either fully powder coated or polished. The powder-coated version is coated with resistant Tiger powder paint in RAL 7021 with fine matt texture.

In the polished frame version, the V-shaped support located under the seat is always coated black-grey RAL 7021 with fine matt texture, as is the underside of the seat frame. Armrests are always executed with matching surface. The surface of the screws is optically oriented to the frame surface.

The armchair shells are upholstered throughout with classic, elegant full-grain premium semi-aniline ‚Ascot‘ leather from Gmelich. All used Upholstery foams are manufactured without CFCs. Visible shells have an Ash top sheet and are satin matt lacquered.

For the textile versions we primarily use high-quality woolen fabrics and natural fibres from established manufacturers in the industry, e.g. Kvadrat, Camira, Gabriel. Besides our standard fabrics we also gladly test and upholster your individually desired cover for you. The serial fabric selection can be found under:

Automatic alignment

All **moin** action-chairs are equipped with a patented and maintenance-free alignment mechanism which aligns the shell orthogonally to the frame.

This facilitates manoeuvring and nesting and creates a calm image of the star-bases around the table. When sitting down the mechanic is decoupled and the armchair rotates freely through 360°.

Castors

In the standard version the armchair is equipped with soft allround ‚Move‘ double castors equipped with no-noise pens from Gross and Froehlich in black. All Other Castor surfaces for different floors of the ‚Move‘ collection are available on Request. The castors are delivered with a standard transport protection, which is removed by the customer.

Security

The armchair is currently GS-certified at TÜV Rheinland / LGA Products.
